Experience Summary:

I have a decade and a half of experience in software engineering. My early career was mostly startups, working on social media projects, as well as security, automation, and microservices projects. Later I worked in large corporate IT, on critical systems, research and development projects, and production commercial websites. I have developed fluency in a variety of programming languages, cloud resource systems, databases, and related technology.

Services Offered:

All web-services, microservices, front-end, back-end, databases, cloud services, distributed systems, autonomous systems, AI system configuration, high-speed in-memory data caches, embedded software / hardware systems.

Skillset:

Rust, Python, Redis, PostgreSQL, AWS, Linux, ...

Education:

I am primarily self-educated.
